I am trying to fill form located here

http://www.24directory.com.ar/submit.php

using web browser control.

i am using below mentioned code

```
Private Sub WebBrowser1_DownloadComplete()

Dim looping As Integer
Dim hDoc As MSHTML.HTMLDocument
Dim hCol As MSHTML.IHTMLElementCollection
Dim hInp As MSHTML.HTMLInputElement
Dim hSub As MSHTML.HTMLInputButtonElement
Dim hTxt As MSHTML.HTMLInputTextElement

Me.Caption = WebBrowser1.LocationName
If WebBrowser1.Busy = False Then
For looping = 1 To 10000
Next

Set hDoc = WebBrowser1.Document
Set hInp = hDoc.getElementById("TITLE")
If hInp Is Nothing = False Then
hInp.Value = "free humor"
End If

Set hInp = hDoc.getElementById("URL")
If hInp Is Nothing = False Then
hInp.Value = "http://freehumours.blogspot.com"
End If

Set hInp = hDoc.getElementById("DESCRIPTION")
If hInp Is Nothing = False Then
' hInp.Options.Add "Free humorous jokes for all ages and all categories." ' giving error
End If

Set hInp = hDoc.getElementById("OWNER_NAME")
If hInp Is Nothing = False Then
hInp.Value = "zenil shroff"
End If

Set hInp = hDoc.getElementById("OWNER_EMAIL")
If hInp Is Nothing = False Then
hInp.Value = "zenilshroff@yahoo.com"
End If

Set hInp = hDoc.getElementById("CATEGORY_ID")
```

```
If hInp Is Nothing = False Then
'hInp.Select ("Entertainment") ' giving error
End If

Set hInp = hDoc.getElementById("reciprocal")
If hInp Is Nothing = False Then
hInp.Value = ""
End If
End If

End Sub
```

i am also unable to select radio button regular link.

I just want to know how to add text to textarea box "Description" and also want to know how to select specific category from combobox category.

Thanks once again.

want to know how to select specific category from combobox category.

Thank you the_grove_man for your friendly help and support!

Hi Zenilshroff,

Welcome to MSDN forums!

Now I come up with the solution in VB.NET, please take it a try:

In VB.NET, you can use GetElementsByTagName or GetElementsByID function
to locate webpage elements and automate them (e.g. get/set element value, click
button).

Good sample: http://forums.microsoft.com/MSDN/ShowPost.aspx?
PostID=2486275&SiteID=1

Automatically login in one website (input uername/password and click Login button)

By Viewing html code of the page http://www.24directory.com.ar/submit.php, you
can find the three elements in question:

1. Regular links Radio Button

```
<input type="radio" name="LINK_TYPE" value="normal" >
```
2. Description RichTextBox
```
<textarea name="DESCRIPTION" rows="3" cols="37" class="text"></textarea>
```
3. Category ComboBox
```
<select name="CATEGORY_ID">
<option label="[Top]" value="0" selected="selected">[Top]</option>
<option label="|___Automotive" value="1">|___Automotive</option>
<option label="|   |___Alarms - Audio - Video"
value="734">|   |___Alarms - Audio - Video</option>
... more options
</select>
```

Then the following code sample will work perfect as you expect in VB.NET:

Code Snippet

```vb
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As
System.EventArgs) Handles MyBase.Load
        ' Load particular page in WebBrowser object
        WebBrowser1.Navigate("http://www.24directory.com.ar/submit.php")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As System.Object,
ByVal e As System.Windows.Forms.WebBrowserDocumentCompletedEventArgs)
Handles WebBrowser1.DocumentCompleted
        ' Part 1: Locate the Radio button "Regular links" and automatically click it
        '<input type="radio" name="LINK_TYPE" value="normal">
        Dim theElementCollection As HtmlElementCollection =
WebBrowser1.Document.GetElementsByTagName("Input")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlValue As String = curElement.GetAttribute("Value").ToString
            If controlValue = "normal" Then
                curElement.InvokeMember("click")
            End If
        Next

        ' Part 2: Locate the Description RichTextBox and automatically input some
text
        '<textarea name="DESCRIPTION" rows="3" cols="37" class="text"></textarea>
        theElementCollection =
WebBrowser1.Document.GetElementsByTagName("textarea")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("name").ToString
            If controlName = "DESCRIPTION" Then
                curElement.SetAttribute("Value", "Some description")
            End If
        Next

        ' Part 3: Locate the Category ComboBox element and automatically choose
one option
        '<select name="CATEGORY_ID">
        '<option label="[Top]" value="0" selected="selected">[Top]</option>
        '<option label="|___Automotive" value="1">|___Automotive</option>
        '<option label="|   |___Alarms - Audio - Video"
value="734">|   |___Alarms - Audio - Video</option>
        '</select>
        theElementCollection =
WebBrowser1.Document.GetElementsByTagName("select")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("name").ToString
            If controlName = "CATEGORY_ID" Then
                curElement.SetAttribute("Value", "1")
            End If
        Next
    End Sub

End Class
```

Best regards,
Martin

Hi tech,

Here is code sample for you to try:

```vb
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs
        'Part 1: Load web page in Form_Load event
        WebBrowser1.Navigate("https://www.yoursite.com/")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As System.Object, ByVa

        'Part 2: Detect if a textbox is empty on a web page
        'e.g. There is such textbox: <INPUT id=username maxLength=96 size=17 name=log
        Dim theElementCollection As HtmlElementCollection = WebBrowser1.Document.GetE
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("id").ToString
            If controlName = "username" Then
                Dim txtValue As String = curElement.GetAttribute("Value") ' Get value/text from
                If txtValue.Trim = "" Then
                    MessageBox.Show("This TextBox on web page is empty.")
                End If
            End If
        Next
    End Sub

End Class
```

Related code samples:

1. Automatically login in one website (input uername/password and click Login button)

http://forums.microsoft.com/MSDN/ShowPost.aspx?PostID=2486275&SiteID=1

2. Automatically Live search http://www.live.com/ (enter search keyword and click Search button)

http://forums.msdn.microsoft.com/en-US/vbgeneral/thread/f06fcdca-ed9b-464b-ba08-edd26b0dc801/

Best regards,

Martin Xie

This was exactly the help I needed too!!!!!!   Could you help me figure out one
more thing? I need to figure out how to detect if a text box is empty of
text on a web form.

Thanks!

Hi tech,

Here is code sample for you to try:

```vb
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs
        'Part 1: Load web page in Form_Load event
        WebBrowser1.Navigate("https://www.yoursite.com/")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As System.Object, ByVa

        'Part 2: Detect if a textbox is empty on a web page
        'e.g. There is such textbox: <INPUT id=username maxLength=96 size=17 name=log
        Dim theElementCollection As HtmlElementCollection = WebBrowser1.Document.GetE
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("id").ToString
            If controlName = "username" Then
                Dim txtValue As String = curElement.GetAttribute("Value") ' Get value/text from
                If txtValue.Trim = "" Then
                    MessageBox.Show("This TextBox on web page is empty.")
                End If
            End If
        Next
    End Sub

End Class
```

Related code samples:

Hi devpan,

The WebBowser control is on Toolbox by defaul, you should be able to find it. If not there, you can add it to Toolbox like this:

Right-click on Toolbox -> Choose item -> .NET Framework Components -> Locate "WebBowser" and add it to Toolbox

Best regards,
Martin Xie

Hey Martin Xie!

You are extremely brilliant, oh & a cute asian guy! lol .'o)

I was wondering if you would pm me since I see that you know exactly what source code I'm looking for. I will give you better detail with what it is that I'm trying to do. Please contact me a.s.a.p.. Thank you

Code Snippet

```vb
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles MyBase.Load
        ' Load particular page in WebBrowser object
        WebBrowser1.Navigate("http://www.24directory.com.ar/submit.php")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As System.Object, ByVal e As System.Windows.Forms.WebBrowserDocumentCompletedEventArgs) Handles WebBrowser1.DocumentCompleted
        ' Part 1: Locate the Radio button "Regular links" and automatically click it
        '<input type="radio" name="LINK_TYPE" value="normal">
        Dim theElementCollection As HtmlElementCollection = WebBrowser1.Document.GetElementsByTagName("Input")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlValue As String = curElement.GetAttribute("Value").ToString
            If controlValue = "normal" Then
                curElement.InvokeMember("click")
            End If
        Next

        ' Part 2: Locate the Description RichTextBox and automatically input some text
        '<textarea name="DESCRIPTION" rows="3" cols="37" class="text"></textarea>
        theElementCollection = WebBrowser1.Document.GetElementsByTagName("textarea")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("name").ToString
            If controlName = "DESCRIPTION" Then
                curElement.SetAttribute("Value", "Some description")
            End If
        Next

        ' Part 3: Locate the Category ComboBox element and automatically choose one option
        '<select name="CATEGORY_ID">
        '<option label="[Top]" value="0" selected="selected">[Top]</option>

1. Regular links Radio Button

```
<input type="radio" name="LINK_TYPE" value="normal" >
```
2. Description RichTextBox
```
<textarea name="DESCRIPTION" rows="3" cols="37" class="text">
</textarea>
```
3. Category ComboBox
```
<select name="CATEGORY_ID">
<option label="[Top]" value="0" selected="selected">[Top]</option>
<option label="|___Automotive" value="1">|___Automotive</option>
<option label="|   |___Alarms - Audio - Video"
value="734">|   |___Alarms - Audio - Video</option>
... more options
</select>
```

Then the following code sample will work perfect as you expect in VB.NET:

Best regards,
Martin

Hey Martin Xie!

You are extremely brilliant, oh & a cute asian guy! lol .'o)

I was wondering if you would pm me since I see that you know exactly what source code I'm looking for. I will give you better detail with what it is that I'm trying to do. Please contact me a.s.a.p.. Thank you

Code Snippet

```
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As
System.EventArgs) Handles MyBase.Load
        ' Load particular page in WebBrowser object
        WebBrowser1.Navigate("http://www.24directory.com.ar/submit.php")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As
System.Object, ByVal e As
System.Windows.Forms.WebBrowserDocumentCompletedEventArgs)
Handles WebBrowser1.DocumentCompleted
```

```vb
        ' Part 1: Locate the Radio button "Regular links" and automatically
click it
        '<input type="radio" name="LINK_TYPE" value="normal">
        Dim theElementCollection As HtmlElementCollection =
WebBrowser1.Document.GetElementsByTagName("Input")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlValue As String =
curElement.GetAttribute("Value").ToString
            If controlValue = "normal" Then
                curElement.InvokeMember("click")
            End If
        Next

        ' Part 2: Locate the Description RichTextBox and automatically
input some text
        '<textarea name="DESCRIPTION" rows="3" cols="37" class="text">
</textarea>
        theElementCollection =
WebBrowser1.Document.GetElementsByTagName("textarea")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String =

Hi tech,

Here is code sample for you to try:

```
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.Event
        'Part 1: Load web page in Form_Load event
        WebBrowser1.Navigate("https://www.yoursite.com/")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As System.Object, E

        'Part 2: Detect if a textbox is empty on a web page
        'e.g. There is such textbox: <INPUT id=username maxLength=96 size=17 name
        Dim theElementCollection As HtmlElementCollection = WebBrowser1.Document.
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("id").ToString
            If controlName = "username" Then
                Dim txtValue As String = curElement.GetAttribute("Value") ' Get value/text
                If txtValue.Trim = "" Then
                    MessageBox.Show("This TextBox on web page is empty.")
                End If
            End If
        Next
    End Sub

End Class
```

Related code samples:

1. Automatically login in one website (input uername/password and click Login button)
http://forums.microsoft.com/MSDN/ShowPost.aspx?PostID=2486275&SiteID=1
2. Automatically Live search http://www.live.com/ (enter search keyword and click Search button)
http://forums.msdn.microsoft.com/en-US/vbgeneral/thread/f06fcdca-ed9b-464b-ba08-edd26b0dc801/

Best regards,
Martin Xie

Hey Martin!!!

I love your assistance & I see why you receive 5 Medals.

I wanted to ask you how I can make vb 2008 connect to web forms, fill them out & submit them all from vb 2008 objects/fields.

E.g. My vb form will have a gui that consists of textboxes, buttons etc... that will enter the data to web forms.

Here is Google accounts Sign-Up page & I want to automate the Sign-Up process:
https://www.google.com/accounts/NewAccount?
service=mail&continue=http%3A%2F%2Fmail.google.com%2Fmail%2Fe-11-
fc4379ac90e2fef7720c8de75a360-
362bd288067d57f1a0e8fd1f2e271813505fccfb&type=2

Please take a look at this Gmail Account Creator app. that automate sign-up & see if you can assist me on this:

http://sites.google.com/site/akfdajfdlkjcom/

All I need is for you to tell me how to connect to the fields on any webpage that I want from VB 2008 Fields to any Web forms. I would really appreciate your help on this.

Hey Martin,

Thanks for you quick reply, however, I'm trying to do the same thing that VisualBasicCoder is doing. I would like to control the fields from my vb form to the web form.

e.g. If it were the yahoo login page, I would like to send the data that was typed **FROM** the **VB** Username textbox **TO** the web form Username textbox so that whatever data I typed in the vb form will then transfer the data into the web forms fields. Then I will fire the webbrowser from the vb form's START button in which it will then launch the specified url and enter the data from the vb form to the web form.

I think I need to make the vb textbox match the web form textbox so that whatever I type into vb will then send the data to the web form. I'm not sure how to implement this type of source code. Any input? Thanks.

Thanks Again Martin !!!

I really appreciate your help again. I think you are probably the best here that I've seen. By the way, what is your paypal ID? I want to donate a few bucks for you spectacular help & I want to send a few good words to MS about you. You deserve it.

Also, dont worry bout answering the last question because thanks to your other help, I have also put the pieces together for this one.

Please write back and I will put in a few bucks and pay a good compliment to MS of you. Thanks again brother!

Hi i would like to know what is this control WebBrowser1, do we need to import anything to get this, as i am not able to get this in vb.net, visual studio 2005

HI devpan,

The WebBowser control is on Toolbox by defaul, you should be able to find it. If not there, you can add it to Toolbox like this:
Right-click on Toolbox -> Choose item -> .NET Framework Components -> Locate "WebBowser" and add it to Toolbox

Best regards,
Martin Xie

Hi VBLearner,

Thank you for your kind words. You're welcome!

Here is code sample for you to take it a try.

Prerequisites: RadioButton1, TextBox1, Button1 and WebBrowser1 onto Form1.

```
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.Even
tArgs) Handles MyBase.Load
        'You can consider loading web page in Form_Load event
        WebBrowser1.Navigate("https://www.google.com/accounts/NewAccount?service
=mail&continue=http://mail.google.com/mail/e-11-745825ad9b106868d4fd368138fea2-0
39b03a0c2043cc8c2eb61e83c49b9628d5aa6fa&type=2")
    End Sub

    Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.E
ventArgs) Handles Button1.Click
        'Disable all controls after clicking Start button
        For Each c As Control In Me.Controls
            c.Enabled = False
        Next

        ' Locate the two Password TextBoxes and automatically input password
        ' <input type="password" name="Passwd" id="Passwd" size="30" onkeyup="Cr
eateRatePasswdReq('createaccount')"/>
        ' <input type="password" name="PasswdAgain" id="PasswdAgain" size="30"/>

        Dim theElementCollection As HtmlElementCollection = WebBrowser1.Document
.GetElementsByTagName("Input")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("Name").ToString
            If controlName = "Passwd" Or controlName = "PasswdAgain" Then
                If RadioButton1.Checked = True Then
                    curElement.SetAttribute("Value", TextBox1.Text) 'Pass passwo
rd from Form to web page
                End If
            End If
        Next

        ' Then you can locate and automate other web elements

        'Enable all controls after WebBrowser Automation actions
        For Each c As Control In Me.Controls
            c.Enabled = True
        Next

    End Sub

End Class
```

Additionally, if you want to load web page and perform actions once the start button has been clicked, please use this code sample:

Prerequisites: RadioButton1, TextBox1, Button1 and WebBrowser1 onto Form1.

```
Public Class Form1

    Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles Button1.Click
        'Disable all controls after clicking Start button
        For Each c As Control In Me.Controls
            c.Enabled = False
        Next

        'Loading web page after clicking Start button
        WebBrowser1.Navigate("https://www.google.com/accounts/NewAccount?service=mail&continue=http://mail.google.com/mail/e-11-745825ad9b106868d4fd368138fea2-039b03a0c2043cc8c2eb61e83c49b9628d5aa6fa&type=2")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As System.Object, ByVal e As System.Windows.Forms.WebBrowserDocumentCompletedEventArgs) Handles WebBrowser1.DocumentCompleted
        ' Locate the two Password TextBoxes and automatically input password
        ' <input type="password" name="Passwd" id="Passwd" size="30" onkeyup="CreateRatePasswdReq('createaccount')"/>
        ' <input type="password" name="PasswdAgain" id="PasswdAgain" size="30"/>
        Dim theElementCollection As HtmlElementCollection = WebBrowser1.Document.GetElementsByTagName("Input")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("Name").ToString
            If controlName = "Passwd" Or controlName = "PasswdAgain" Then
                If RadioButton1.Checked = True Then
                    curElement.SetAttribute("Value", TextBox1.Text) 'Pass password from Form to web page
                End If
            End If
        Next

        ' Then you can locate and automate other web elements

        'Enable all controls after WebBrowser Automation actions
        For Each c As Control In Me.Controls
            c.Enabled = True
        Next

    End Sub

Thanks again Martin. As I have said in the past, you are the best here. :oD

I still have a lot of questions since I'm new to vb 2008 and I will only ask a few for now.

1- How do I get the InputBox to enter the data into the CAPTCHA Textbox with only one press of the "Enter" key instead of having to press it three times to make the data connect?

2- I want to implement proxy rotation into my form. Can you direct me to a good vb 2008 proxy tutorial?

3- I also want to forward my emails to one main account, but I can't get my form to automatically click the "Show me my account button" (can't find the html button for it .) This is on the second page of google accounts and the third page is where I would automate the forwarding to one main gmail account. I just need to get past the second page with the button click of "Show me my account".

If you can't answer all three at this time, that's okay, but I would appreciate if you could answer 2-3 which is most important right now. I really want to finish this software program a.s.a.p..
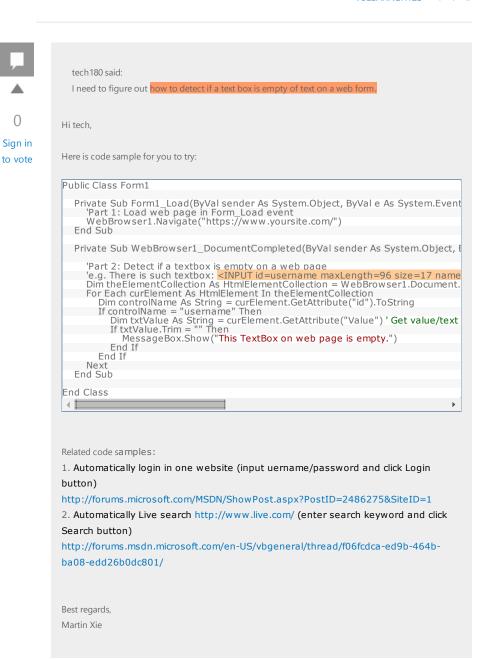

Thanks again martin and sorry if this is too much, but I figured you could easily answer these q's since you are soo great at this

I need to figure out how to detect if a text box is empty of text on a web form.

Hi tech,

Here is code sample for you to try:

```
Public Class Form1

    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.Event
        'Part 1: Load web page in Form_Load event
        WebBrowser1.Navigate("https://www.yoursite.com/")
    End Sub

    Private Sub WebBrowser1_DocumentCompleted(ByVal sender As System.Object, E

        'Part 2: Detect if a textbox is empty on a web page
        'e.g. There is such textbox: <INPUT id=username maxLength=96 size=17 name
        Dim theElementCollection As HtmlElementCollection = WebBrowser1.Document.
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("id").ToString
            If controlName = "username" Then
                Dim txtValue As String = curElement.GetAttribute("Value") ' Get value/text
                If txtValue.Trim = "" Then
                    MessageBox.Show("This TextBox on web page is empty.")
                End If
            End If
        Next
    End Sub

End Class
```

Related code samples:

1. Automatically login in one website (input uername/password and click Login button)

http://forums.microsoft.com/MSDN/ShowPost.aspx?PostID=2486275&SiteID=1

2. Automatically Live search http://www.live.com/ (enter search keyword and click Search button)

http://forums.msdn.microsoft.com/en-US/vbgeneral/thread/f06fcdca-ed9b-464b-ba08-edd26b0dc801/

Best regards,
Martin Xie

I would like to automate the following page:
https://post.craigslist.org/atl/S/msg/none/x but I noticed when I click "View Source" on IE, that Craigslist has made some of the elements hidden or not visible.

This code isn't clicking the button:

theElementCollection = WebBrowser1.Document.GetElementsByTagName(

"input")

For Each curElement As HtmlElement In theElementCollection

If curElement.GetAttribute("value").Equals("Continue") Then

curElement.InvokeMember("click")

End If

Next

Next

I figured out how to automate everything on this page except the button click. I tried all the methods that I seen within the forums, but I still can't get the "Continue Button" on the bottom of this page to click and go to the next page. Any input would be appreciated.

This looks like vb6 code, you may want to post your question in another post

I would like to automate the following page:

1. No matter whether some elements are hidden from page UI, we usually can locate them based on element attributes and automate them.

FAQ: How do I automate a web page (e.g. retrieve page text, login website, search, click button or hyperlink) via WebBrowser

http://social.msdn.microsoft.com/Forums/en-US/vbgeneral/thread/23dfc3f9-3274-4929-8dc5-9ba543f4911d

2. Please double check the page HTML code and the "Continue" button's HTML code is as below:

    <button tabindex="1" type="submit"
name="U2FsdGVkX18xNTM0NDE1MyrfgTOsvyQELh:vRUZTG-gO8x8oD7PQ.-4ruvlg6b9avo"
value="Continue">Continue</button>

Please note: Its TagName is "button" not "input".

Correct code sample

```
    Dim theElementCollection As HtmlElementCollection
    theElementCollection = WebBrowser1.Document.GetElementsByTagName("button")
    For Each curElement As HtmlElement In theElementCollection
      If curElement.GetAttribute("value").Equals("Continue") Then
        curElement.InvokeMember("click")
      End If
    Next
```

Best regards,

Martin Xie

```
    ' Part 3: Locate the Category ComboBox element and automatically
choose one option
    '<select name="CATEGORY_ID">
    '<option label="[Top]" value="0" selected="selected">[Top]</option>
    '<option label="|___Automotive" value="1">|___Automotive</option>
    '<option label="|   |___Alarms - Audio - Video"
value="734">|   |___Alarms - Audio - Video</option>
    '</select>
    theElementCollection =
WebBrowser1.Document.GetElementsByTagName("select" )
    For Each curElement As HtmlElement In theElementCollection
        Dim controlName As String = curElement.GetAttribute("name"
).ToString
        If controlName = "CATEGORY_ID" Then
            curElement.SetAttribute("Value" , "1" )
        End If
    Next
```

Hi,

I have HTML code something like this:

```
<tr><td>Type:</td><td>
<select name='link_type'>
<option value='1'>Option 1</option>
<option value='2' SELECTED>Option 2</option>
<option value='3'>Option 3</option>
</select>
```

And this is my code (only partial of it shown):

```
        Dim theElementCollection As HtmlElementCollection
        theElementCollection = WebBrowser1.Document.GetElementsByTagNa
me("Input")
        For Each curElement As HtmlElement In theElementCollection
            Dim controlName As String = curElement.GetAttribute("name"
).ToString
            If controlName = "link_type" Then
                curElement.SetAttribute("Value", "1")
            End If
        Next
```

It seems there is nothing happens. I managed to send username, password, click button
and as well as auto click the hypelink by following the guide that I found here , but not this
dropdown menu.

Hope somebody can help me.

Regards.

Hi Martin,

Thanks for your VB.NET codes and it has been a really good help for me. I am automating a webpage to fill the required fields and then sign up automatically for me. but their is problem that how to automatically fill in the captcha field. your help would be appreciated by me or can u tell me how to link a API with the code you provided above.

Regards,

Wahab

hello martin....

I have a question, what if the above conditions behind ..?
so, when I press the button on the webpage then it will be shown on the form ... eg if the web page using HTML language ...?
so, how should we write the script?

Dear Martin,

I know a lot of time passed since you posted here the routine to select into the combo box, but I'm facing now this issue and (even writing C# code) I think I got stuck at the same point but having a doubt that may will wolve my problem: selecting with SetAttribute an option does automatically mean invoke a click on that item? I suppose not. If the answer is really "NO", what should be invoked among these options:

1) the click on the selected option

2) the click on the select tag (meaning the comboBox)

3) a submin on the surrounding form Tag

4) a 4th case that I do not see?

Could u may help me?

tks
